

OLUWASEUN FATUKASI

PRODUCT DESIGNER | UX • UI • SaaS • MARKETPLACE

Remote | Nigeria | ocfatukasi@gmail.com | [linkedin.com/in/ocfatukasi](https://www.linkedin.com/in/ocfatukasi) | seunfatukasi.com

SUMMARY

Product Designer with 3+ years of professional experience designing digital products across B2B SaaS, marketplaces and web platforms, including products for international teams. I work across the full design process, from understanding the problem and mapping user flows to wireframing, prototyping, high-fidelity UI, design systems, testing and developer handoff. I'm particularly comfortable with complex workflows where the challenge is making something complicated feel simple.

EXPERIENCE

PRODUCT DESIGNER | Spritz | USA • Remote

Mar 2024 – present

Spritz is a business-management platform initially built for cleaning businesses, bringing scheduling, pricing, invoicing, payments, customers, reminders and job management into one place.

- Designed and redesigned 4+ major product areas, including pricing, invoicing, payments, scheduling/calendar, rescheduling, job logs and the core home experience.
- Worked across 100+ screens spanning complex workflows and product states, translating operational requirements into clearer, task-focused experiences.
- Managed and scaled a 150+ component Figma design system, contributing new components, cleaning up existing patterns, maintaining consistency and supporting responsive/accessibility requirements.
- Conducted 20+ usability tests and used findings to identify friction across core workflows, including job creation, scheduling, job completion and payment confirmation.
- Partnered directly with the CEO/Product Lead, Product Manager, CTO and frontend engineering to scope features, challenge assumptions, work through edge cases and balance user needs with technical constraints.
- Supported live-product UX by investigating user issues, reproducing edge cases, documenting issues in Jira and validating fixes through QA.
- Contributed beyond core product design when needed, including marketing assets, email designs and pitch decks.
- Impact: Early iterations of the redesigned workflows increased task completion by 25% and weekly active users by 18%, while improving design-to-development handoff efficiency.

PRODUCT DESIGNER | HireCleaner | USA • Remote

Oct 2024 – Mar 2025

HireCleaner is a two-sided cleaning marketplace connecting customers with cleaners.

- Sole designer responsible for the end-to-end product experience across 60+ screens and two major product iterations.
- Designed experiences for both customers and cleaners, covering onboarding, property specification, service selection, pricing, scheduling, booking, payments, rescheduling, refunds, job acceptance and earnings.
- Worked directly with the CEO and two engineers to translate business requirements into workable product flows and resolve technical and business-rule edge cases.
- After the first version underperformed, conducted approximately 15 user interviews across customers and cleaners to understand where the product was falling short.
- Redesigned the property-specification and booking experience around information users actually understood—rooms, bathrooms, cleaning areas and service type—rather than expecting users to understand technical property terminology.
- Designed the interaction for live pricing updates as users changed their property and service requirements, working alongside the product's pricing logic.
- Simplified the booking journey to an average completion time of approximately 3–4 minutes.
- Supported the launch of the second product iteration, which generated approximately \$11K in revenue over its first 2–3 months, with repeat bookings from returning customers.

WEB / UX DESIGNER | Nutrifield AgriConsult | NG • Contract

Nov 2023 – Sep 2024

- Led the design of a 20+ page corporate website from initial discovery and information architecture through wireframes, visual design, prototyping and developer handoff.
- Worked directly with the client to translate a broad business brief into a clearer digital presence covering services, capabilities, case studies, company information, careers and contact journeys.
- Took significant ownership of product/project coordination in the absence of a dedicated Product Manager, helping define what needed to be designed, prioritizing work and driving the project toward completion.
- Created reusable responsive page patterns and implementation guidance for WordPress.
- Collaborated with the implementation engineer throughout development and supported design QA and revisions through delivery.
- Managed an approximately 9-month engagement involving multiple rounds of stakeholder feedback and iteration.

- Contributed to the design of a multi-sided school management/LMS platform used by schools, teachers, students, parents and administrators.
- Supported design work across dashboards and workflows for school administration, student performance, assignments, teacher grading, parent communication and school-fee payments.
- Worked alongside senior designers, the founder, Product Managers and engineers, gaining hands-on experience in product discovery, design critique, interaction patterns and design-system thinking.
- Produced UI work, iterations and supporting design tasks while learning the end-to-end product design process within a cross-functional team.

SELECTED PRODUCT STRENGTHS

Product Design: User flows • Wireframing • Interaction Design • Visual/UI Design • Prototyping • Responsive Design • Mobile-first Design

Research & Validation: User Interviews • Usability Testing • Qualitative Synthesis • Iterative Design • Analytics-informed UX

Systems: Design Systems • Component Libraries • Figma Variables • Auto Layout • Variants • Design Documentation • Accessibility/WCAG

Product: Problem Framing • Information Architecture • Onboarding • Complex Workflows • Conversion • Product Strategy • Feature Prioritization

Collaboration: Product Managers • Engineers • Founders • CTOs • Stakeholders • Design Critique • Design QA • Developer Handoff

TOOLS

Design: Figma • FigJam • Miro • Adobe Creative Suite

Product & Collaboration: Jira • Notion • Google Workspace

Research & Analytics: Google Analytics • Hotjar • Usability Testing

Web: HTML/CSS • WordPress • Next.js • Git/GitHub

AI: ChatGPT • Figma AI • Gemini/NotebookLM • Lovable

AI-ASSISTED PRODUCT DEVELOPMENT

- Use ChatGPT and Figma AI for design exploration, workflow critique, research synthesis, meeting-note analysis and rapid iteration.
- Built and deployed my personal portfolio using Next.js with AI-assisted development, using Figma designs as a visual reference and working through implementation with AI.
- Use AI as a design thinking partner to challenge assumptions, identify edge cases and explore alternative solutions, not as a substitute for product judgment.

EDUCATION

B.TECH. Project Management
Federal University of Technology, Akure

2011 – 2016
